

## SDVOSB COVID-19 Office Solutions' new Thermal Imaging Camera Cart Systems detects Elevated Temperature supports a safe and healthy workplace.

July 29, 2020 10:00 AM Eastern Daylight Time

Brooklyn NY - SDVOSB Materials Technology & Supply LLC (<https://www.sdvosbmaterials.com/>) an American company and a Service Disabled, Veteran Owned, Small Business (SDVOSB) Certified Diversity Manufacturer, announces the launch of its SDVOSB Thermal Camera Carts to battle the COVID-19 Pandemic by measuring Elevated Skin Temperature (EST) to detect potentially feverous people and groups at major health, education, government, entertainment, and commercial facilities across the nation.

COVID-19 in the workplace is a growing concern across the Nation. Many facilities are currently checking people's temperature one-at-a-time, by hand. Personnel costs for hand temperature measurements are expensive, and this bottleneck causes entry lines around the block. This is not helping to calm concerns.

The ReOpening is here and people want to feel safe as they return to the workplace and go out to events, school, etc. These technology systems help provide a safe and healthy facility for a most valuable resource – staff, visitors and clients. And provide potential cost savings too.

Our exclusive thermal camera technology is preconfigured for monitoring individuals and groups to find temperature deviations or elevated skin temperature that could be a symptom of COVID-19. This temperature measurement solution offers built-in analysis, alarm functionality, and is an FDA 510(K) Cleared Class 1 Device. Our models include temperature EST settings with a dynamically updated reference temperature.

Many of our medical clients are seeing a clear, positive ROI with our automated temperature measurement solution. The status quo has multiple, high cost, health professionals testing by hand, one-by-one, 24/7. Some are seeing a payback in as short as 30 days when they look at the salary, benefits and overhead costs of health professionals, at a non-billable position for full shifts, maybe 2 to 3 shifts a day, 7 days a week. And we are seeing a great reduction of the sometimes-lengthy queues to get clients, visitors and staff safely into the facility, tested and ready to work. This increases efficiency and can generate a positive entry experience, and getting staff back to work to generate needed revenue.

Cyber security and foreign-made "facial recognition" electronic equipment are in the news ... and it's not good. Foreign governments eavesdropping on our citizens and stealing personal data and images are an everyday concern. With our systems, information stays safe and secure; our systems are HIPAA & EEOC Compliant, and our cameras are FDA 510(k) Cleared to assure your safety. The SDVOSB Thermal Camera Carts are made in the USA using secure equipment. Our systems and software do not transmit data to outside sources. Buying American means buying quality and safety for your critical personal information and cyber data.

“We developed the SDVOSB Thermal Camera Cart Suite of EST Systems to bring safety and security to the workplace during this Pandemic. And it is working! Our clients are seeing the positive results of fast and accurate temperature measurements,” says Harrison Kendall, Service-Disabled Veteran and CEO of SDVOSB COVID-19 Office Solutions. He goes on, “As my family fought in two World Wars, and as I served our Nation in Afghanistan, our mission was to protect our nation. The COVID-19 corona virus is the new enemy and a real threat to our entire country. We work every day to eliminate this enemy for the well-being of our clients and our country.”

And our clients are our focus. Elise Sutherland, Health Management Projects at the Cerebral Palsy Associations of NYS said about SDVOSB COVID-19 Office at SDVOSBmaterials.com, “The quality of service and materials provided by your company ensured our ability to actualize our goal. We are grateful for your efficient, gracious customer service, the level of detail, collaboration, and accountability you have demonstrated regarding this intensely structured project. We could not conduct our business without you! Due to our positive relationship with you, we would most certainly like to continue our work together and recommend your service to other companies and contacts. Our team could not be more satisfied with your work, and we look forward to continuing this relationship!”

There is a clear vision at SDVOSB Materials Technology & Supply LLC to further assist their neighbors and their businesses and organizations with the COVID-19 pandemic ReOpening program.

About SDVOSB Materials Technology & Supply LLC

SDVOSB Materials Technology & Supply LLC is a service disabled, veteran-owned and family-run business that believe in providing top quality value and satisfaction to our clients. Based in New York City, Harrison James Kendall (U.S. Army - Operation Enduring Freedom, Forward Operating Base Salerno, Afghanistan, now 100% disabled combat veteran, verified by the VA) established the business in 2017. After serving our country in combat with the U.S. Army, Harrison has begun his career as a 100% Service-Disabled, Combat Veteran Business owner.
